GEUTEBRüCK

Failover system for the Video Management Software G-Core
G-Core Failover

G-Core Failover

Geutebrück Software G-Core (64 Bit) is developed for the requirements of high security systems. The processing of 128 IP signals and database sizes of 320 TB is supported. The software is required on every G-Core failover system. The G-Core Failover can only be used standalone on one system. G-Core options are taken from the master server. The options G-Tect/ANPR and G-Tect/LPR are excluded. G-Core can be used with Windows OS 10, Server 2019 & 2022. The hardware resources used limit system performance.

Turnkey delivery and installation or turnkey configuration and set-up

Model: G-Core Failover
Brand: Geutebrück or equivalent
