GEUTEBRÜCK

Interface to radar systems (DMT)
G-Core/DMTRadarClient

G-Core/DMTRadarClient

G-Core/DMTRadarClient is a Windows service to connect a radar system manufactured by DMT Radar & Security Systems with Geutebrueck GmbH manufactured G-ST. Alarms raised by the radar system when objects enter a defined zone are processed by the service and forwarded to G-Core. The service calculates the two cameras positioned closest to the object. This enables G-View or G-SIM to display an alarm scene containing the most interesting two camera streams. Object data can be stored in the G-Core database to search offline for alarm related incidents.

Turnkey delivery and installation or turnkey assembly And Connection

Model: G-Core/DMTRadarClient
Brand: Geutebrück or equivalent
