

G-Core Smartphone Connect Application

G-Core/SmartphoneConnect

- capture of video images with smartphone and transmission to G-Core
- capture of barcodes with smartphone and transmission to G-Core
- real-time transmission
- flexible use
- cost saving compared to installing fixed cameras at changing locations
- high comfort of cameras that can be carried by users at all time and everywhere
- Use of inexpensive smartphones
- higher relevance of video footage, since the camera may be focused to the object of interest

A combination of server and smartphone application that enables the use of a smartphone as an IP camera in a G-Core VMS Setup. Video streams as well as alarms/events from the smartphone will be transferred to G-Core and processed as if they were transferred from a regular CCTV camera.

- Goods receipt & shipping documentation
- documentation of damage to goods (insurance)
- documentation of damage to facilities (insurance, legal claims)
- inventory (documentation)
- evidence documentation (security & law enforcement)
